

AHLERS Group provides state-of-the-art logistics solutions in supply chain management, warehousing, factory logistics, projects and machinery logistics, secured transport, trade logistics, after-sales services, and data analytics in 3 regions (Europe, CIS, Asia).

Environmental, Health and Safety is crucial to the way we do the business as a core organizational value.

We are committed to

- comply with all applicable EHS laws, regulations and permits as well as develop and implement high standards based on customers' own requirements;
- promote and foster a Safety Culture where it is the responsibility of everybody to work in partnership to benefit sustainable development as well as ecological and industrial safety;
- perform all operations with safety as the highest priority to protect employees' health, environment, premises, customers goods and brands;
- perform on a regular basis the identification of risks and environmental aspects in all our operations, implement actions to eliminate or mitigate these risks for the preservation of employees' health, prevention of injuries and environmental protection;
- continue to help our customers to optimize their supply chain to reduce vehicle emissions applying our in-house developed carbon footprint CO2 calculator;
- responsibly use natural resources and minimize the environmental impact of our business by supporting advanced environmental practices regarding waste, chemical handling, water usage and energy consumption;
- increase awareness and engagement acting in compliance with EHS policy commitments from employees and persons working for Ahlers or on its behalf, who perform tasks related to the identified safety risks and significant environmental aspects;
- develop our EHS management system to identify the opportunities for its continuous improvement.
